Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a filter, classified in class 210, subclass 283.
- II. Claims 10-19 and 21-23, drawn to a recirculating filtration system, classified in class 210, subclass 196.

The inventions are distinct, each from the other because:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the recirculating filtration system of Group II does not require the specific filter (i.e. having first and second sized aggregates) of Group I, as evidenced by claim 10. The subcombination has separate utility such as in a filtration system which is non-recirculating and/or which does not have troughs integrally formed in the bottom and sides thereof (see amended claim 10).

Art Unit: 1724

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
